Updates and Improvements

Bug Fixes

- When a driver Selects a ride from driver self-selection of rides, the Ride Coordinator was not able to properly Accept the ride assignment. This has been fixed.
- When the calendar turned to January 2023 it surfaced a bug where the GL Posting reports no longer worked between the end of last month and your current month posting date. This bug has been fixed. Also note that the fix introduced a new problem that is now resolved. **If you ran a GL Posting report between January 13 and January 19, 2023 it may be incorrect and you should rerun that GL Posting.**

Tips/Other

- Our software developer erroneously posted all prior cancelled rides. Many of you have seen this as they show up on reports and prior month Daily Overviews. We are working on a fix for this which should be complete next week. There is no financial impact as these rides have no TAI's associated with them.

Volunteer Statements

- Statements showing volunteer mileage and reimbursement for the past year will be available by the end of January.
